Company summary, July 2026

What Voltaneer does

Voltaneer installs clamp on sensors across the major electrical loads in a factory and runs software that identifies where power is being wasted, by machine and by shift. It is sold as an annual subscription with the hardware leased inside it.

Why factories buy

- Average verified saving of 8.4 percent of the monthly power bill.
- No capital expenditure, so no board approval and no depreciation schedule.
- Peak demand penalties are predicted before they are incurred, not explained afterwards.
- Failing motors are caught by their current signature weeks before they stop.

Where the business stands

ARR, July 2026	**Rs 2.34 crore**
Recurring share of revenue	**47 percent, up from 24 percent**
Median sales cycle	**71 days, down from 264 days**
Factories monitored	**88**
Average verified saving per factory	**8.4 percent of the power bill**
Net revenue retention	**118 percent**
Logo churn, trailing 12 months	**6 percent**
Monthly burn	**Rs 16.2 lakh**

What the round funds

The sensor lease fleet, a field team in two new clusters, and automated anomaly detection so a factory gets its action list without an engineer reading the data first.
