

Wastage Tracking Method

How wastage is measured and audited

Definition

Wastage is measured as the weight difference between produce accepted at the Kalpetta hub and produce invoiced to a buyer, expressed as a percentage of accepted weight. Produce rejected at collection is not counted, because it was never bought.

Measurement points

- Weight at collection, recorded on a calibrated platform scale at the collective.
- Weight at hub acceptance, after grading, recorded per crate.
- Weight at buyer delivery, from the signed delivery note.
- Any difference is attributed to one of five causes: transit damage, temperature excursion, grading loss, shelf loss at hub, or buyer rejection.

Audit

A 5 percent sample of crates is re weighed at Feroke daily by a person who does not report to operations. Monthly variance between the sampled and reported figures has stayed under 0.6 points since April 2026.

Twelve month history

Month	Accepted (kg)	Invoiced (kg)	Wastage %	Primary cause
Aug 2025	41,200	31,900	22.6	Transit damage
Oct 2025	48,600	37,900	22.0	Transit damage
Dec 2025	56,100	44,300	21.0	Shelf loss at hub
Feb 2026	64,800	52,100	19.6	Shelf loss at hub
Apr 2026	78,400	67,300	14.1	Grading loss
Jun 2026	94,200	85,700	9.0	Grading loss
Jul 2026	1,02,600	95,000	7.4	Grading loss
