

Cold Chain Route Plan

Network design and daily routing, July 2026

Network

Two hubs: Kalpetta in Wayanad, the collection point for the collectives, and Feroke near Kozhikode, the distribution point for the retail and hotel corridor.

Daily cycle

- 17:00 to 20:00, indent closes for the next day and collectives confirm quantities.
- 04:00 to 07:00, collection runs across Wayanad, produce reaches Kalpetta pre cooling.
- 07:00 to 09:30, grading, weighing and crate loading.
- 09:30 to 12:00, line haul to Feroke.
- 12:00 to 18:00, last mile in three sequenced loops across Kozhikode, Thrissur and Kochi.

Temperature discipline

Leafy produce is held at 2 to 4 degrees, fruit vegetables at 8 to 10 degrees, and ginger and coconut at ambient. Every vehicle logs temperature every four minutes and the log is attached to the delivery note.

What the next two hubs change

- Malappuram removes 61 km from the Kozhikode to Thrissur leg.
- Thrissur brings same day delivery to Kochi, which today is next morning.
- Together they take an estimated 1.1 points off wastage and Rs 0.40 off cost per kg.
