

Product and Technology

How it works

Why retrofit

Purpose built automation needs a new building. Mid sized Indian operators have existing racking, existing aisles and no capital budget. The robots are built to work in the warehouse that is already there.

The fleet software

Traffic management, task allocation and charging scheduling across a mixed fleet, with a floor supervisor view that needs no training to read.

Uptime

97.8 percent across the fleet in Q1 FY27, up from 94.1 percent, mostly from better charge scheduling rather than better hardware.
