

Product and Technology

How it works

What it does

Takes the case sheet and the clinician's notes and produces a discharge summary in the hospital's own format, in English or Malayalam. Median time to produce one falls from 34 minutes to 6.

Why documentation and not diagnosis

Documentation is where clinician time actually goes, the regulatory bar is far lower than a diagnostic device, and the buyer is the administrator who has a budget and a staffing problem.

Safety

Nothing is filed without a clinician signing it. Six percent of summaries are re read by an independent clinician and scored, and that score is reported to the hospital monthly.
