

Sensor Spec Sheet

VT 200 series current and power sensor

Overview

The VT 200 is a clamp on current transformer with an integrated edge module. It installs on a live panel without shutting the line down, which is the single most important property in a factory that cannot stop.

Specification

Measurement range	5 A to 1,200 A, three phase
Accuracy class	Class 0.5S per IS 16444
Sampling rate	1 Hz standard, 1 kHz on the main incomer
Parameters captured	Current, voltage, power factor, kW, kVA, kVAh, THD
Edge storage	72 hours of buffered readings
Connectivity	4G LTE Cat M1 with Wi Fi fallback
Power	Self powered from the measured line, no separate supply
Enclosure	IP65, DIN rail or panel mount
Installation	Clamp on, no line shutdown required

Installation

One field engineer installs 18 to 24 sensors in a day. A typical factory takes two days for main incomer, distribution boards and every motor above 7.5 kW.

Certification

BIS registered, tested to IS 16444. IP65 enclosure rating. Operating range minus 10 to 70 degrees Celsius, tested against the ambient conditions inside a spinning shed.
