

Voltaneer

Energy monitoring for small and mid sized factories

Seed round, July 2026

Coimbatore, Tamil Nadu

The problem

- A spinning mill in Tiruppur pays Rs 14 lakh a month for power and gets one number for it.
- Nobody knows which motor wasted it, or when.
- Idle load, failing bearings and peak demand penalties are invisible until the bill arrives.
- For a factory on 6 percent net margin, 8 percent of the power bill is a third of the profit.

What we do

- Clamp on sensors on every major load, reporting every second.
- Software that names the waste: this motor, this shift, this much money.
- A weekly action list the plant engineer can actually execute.
- Average verified saving across 88 factories is 8.4 percent of the power bill.

What changed in the business

- Recurring revenue was 24 percent of the total in February. It is 47 percent in July.
- Median sales cycle was 264 days in February. It is 71 days in July.
- We did one thing: we stopped selling sensors and started leasing them inside the subscription.
- That moved the buying decision out of capex and into the plant operating budget.

Traction

- ARR of Rs 2.34 crore in July 2026, up from Rs 1.42 crore in February.
- 88 factories live across Coimbatore, Tiruppur, Erode and Pollachi.
- Net revenue retention 118 percent. Logo churn 6 percent.
- Largest account is Rs 5.4 lakh a year, so no single customer is over 3 percent of ARR.

Unit economics

- Year one contribution per factory Rs 2.60 lakh, year two Rs 2.21 lakh.
- Customer acquisition cost Rs 1.34 lakh, recovered in month seven.
- Gross margin on the software line is 84 percent.
- Hardware is now leased, so it sits on our balance sheet and off the customer's.

Why the cluster matters

- Coimbatore, Tiruppur and Erode hold over 25,000 registered factories inside a 90 km radius.
- One field engineer can service 40 sites without an overnight stay.
- Owners talk to each other. 31 of our 88 factories came from a referral.
- The same density exists in Rajkot, Ludhiana and Surat, which is where we go next.

Competition

- Utility provided meters: one number, monthly, no diagnosis.
- Global industrial IoT platforms: priced for plants ten times this size.
- Energy audit consultants: a report once a year, no continuous measurement.
- Our edge is the price point and a field team that lives inside the cluster.

Use of funds

- Rs 7.0 crore, expected to last 18 months.
- Rs 2.6 crore: sensor lease fleet, roughly 300 factories of inventory.
- Rs 2.0 crore: field sales and service in Rajkot and Ludhiana.
- Rs 1.6 crore: engineering, principally automated anomaly detection.
- Rs 0.8 crore: reserve.

The team

- Karthik Subramanian, CEO. Twelve years in industrial power electronics.
- Aravind Rangaswamy, CTO. Metering firmware shipped on 40,000 units.
- Divya Balan, VP Sales. Nine years selling capital equipment into this exact cluster.
- 26 full time, of whom 11 are field engineers.
