What they do

Discharge summary generation for Indian hospitals from clinician notes and the case sheet, in English and Malayalam, cutting documentation time.

Where they are

Live in five hospitals with annualised revenue of Rs 1.4 crore. Median time to produce a discharge summary is down from 34 minutes to 6.

The team

A physician who practised for seven years, an NLP engineer and a hospital operations lead.

Why LIVE admitted them

Documentation, not diagnosis, is where clinician time actually goes. It is a lower regulatory bar than a diagnostic device and the buyer is the hospital administrator, who has a budget.

What an investor should test

Clinician acceptance rate on generated text without editing, whether the hospital information system vendors bundle this, and the accuracy of the Malayalam output.
