

Praan Robotics

Cohort 1 · Robotics · Kochi

What they do

Autonomous mobile robots for mid sized warehouses, retrofitted into existing racking rather than requiring a purpose built facility.

Where they are

Eleven robots deployed across three warehouses. Annualised revenue of Rs 2.1 crore on a robot as a service model at Rs 32,000 per robot per month.

The team

A robotics engineer from an Indian warehouse automation company, a controls specialist and a third founder from third party logistics operations.

Why LIVE admitted them

Warehouse automation in India is sold to the top of the market. The mid sized operator with existing racking and no capital budget is unserved, and the retrofit plus subscription model is built for exactly that buyer.

What an investor should test

Robot utilisation across sites, the cost of the field service model as the fleet grows, and gross margin once hardware depreciation is fully loaded.
