

Quantiva

Cohort 1 · Quantum safe security · Kozhikode

What they do

Post quantum cryptography migration tooling: it inventories where an organisation uses vulnerable cryptography and sequences the replacement.

Where they are

Pre revenue. Two paid discovery engagements with Indian financial institutions. Product is at the inventory stage, with migration orchestration on the roadmap.

The team

A cryptographer with a doctorate and two engineers from a payments security company.

Why LIVE admitted them

The regulatory clock is the whole thesis. Financial regulators will eventually mandate migration, and no Indian institution knows today where its vulnerable cryptography lives.

What an investor should test

Whether the timeline is a real budget cycle or a distant fear, and whether the large security vendors simply add this as a feature.
