Expert reviewed Indian clinical and legal data for frontier model training

Seed round, July 2026

Kochi, Kerala

The problem

- Frontier labs have run out of the easy internet.
- What they need now is judgement: a doctor saying this reasoning is wrong, and why.
- That data does not exist on the web and cannot be scraped.
- India has the experts. Nobody had organised them into a delivery pipeline.

What we do

- We run a panel of 612 practising doctors and 140 advocates.
- They review, correct and rank model output in their own domain, paid per item.
- We deliver it as a versioned dataset with full provenance on every item.
- 1.84 million reviewed items delivered so far.

Why India and why now

- An Indian specialist costs a fraction of a US one and the judgement is the same.
- English medical and legal practice here maps directly onto what the labs need.
- Indian court judgments and clinical notes are an untouched corpus in English.
- Data protection rules mean the labs need an Indian partner, not a scraper.

Traction

- Contracted ARR of Rs 3.10 crore in July 2026, from Rs 0 in October 2025.
- Three frontier lab customers, two in the United States and one in India.
- Two further evaluation pilots running on coding and agentic tasks.
- Inter annotator agreement of 0.89, which is what buys the renewal.

Quality is the product

- Every item is reviewed once, and 18 percent go to a second independent adjudicator.
- Reviewer rejection rate fell from 9.1 percent to 4.1 percent as we tightened selection.
- We publish our disagreement statistics to customers. Nobody else in this market does.
- A lab that trusts your labels does not re run the tender next quarter.

Unit economics

- Rs 41 realised per reviewed item, Rs 22.20 gross contribution.
- Reviewers are paid per item, so cost scales with revenue and not with headcount.
- Gross margin 58 percent and improving as adjudication rates fall.
- No long term reviewer liability, which keeps the balance sheet clean.

The honest risk

- Three customers are 92 percent of our revenue.
- Frontier lab budgets move fast in both directions and we have no contractual minimums.
- If the labs shift decisively to synthetic data this market compresses.
- We are telling you this before you find it in diligence.

Use of funds

- Rs 9.0 crore, expected to last 20 months.
- Rs 3.4 crore: reviewer acquisition, to 2,000 experts across four domains.
- Rs 2.6 crore: platform, principally provenance and adjudication tooling.
- Rs 2.0 crore: a United States facing commercial team.
- Rs 1.0 crore: reserve.

The team

- Nandita Rajagopal, CEO. Ran the medical vertical at a US labelling company, 400 reviewers.
- Basil Thomas, CTO. Built the evaluation harness for three model releases.
- Adv. Shruti Nayar, Legal Domain. Eleven years in the Kerala High Court, runs the advocate panel.
- 31 full time, plus 752 experts active on the panel.
