

Satellite Coverage Map

Coverage, latency and airtime

Coverage

The service uses a low earth orbit short burst data constellation with continuous coverage of the Arabian Sea and Bay of Bengal, including the full extent of the Indian exclusive economic zone at 200 nautical miles.

Latency

Median time from button press to relay receipt is 41 seconds. The 95th percentile is 2 minutes 18 seconds, driven by satellite pass geometry. Position beacons are sent every 10 minutes by default and every 60 seconds after a distress event.

Message budget

The Rs 1,800 annual subscription covers 4,400 short messages, which is roughly 220 fishing days at the default beacon rate. Distress traffic is never metered.

Supplier concentration

Airtime is bought wholesale from a single provider under a contract running to 31 March 2027 at Rs 640 per vessel per year. A second provider has been technically qualified but not contracted. This is disclosed as a material dependency.
