

Product Catalogue and Tooling

Part families, tooling and capacity

Part families

- High current battery and drivetrain terminals rated 80 to 400 amps.
- Signal and sensor connectors, 2 to 24 way, sealed to IP67.
- Charging interface contacts for AC and DC equipment.
- Industrial rectangular connectors for drives and control panels.

Tooling

Eleven progressive stamping tools and nine injection moulds, all designed in house and cut in the Coimbatore tool room. Average tool development is fourteen weeks from drawing release to first article.

Capacity

Current capacity is roughly 14 million contacts a year on two shifts. The two additional moulding machines in the use of funds take that to about 24 million.

Intellectual property

Two granted design registrations on high current terminal geometry. No patents filed. The real protection is the customer qualification, not the registration.
