

Procurement App Overview

Collective facing application, version 2.4

Purpose

The application is used by 34 collective secretaries to confirm the next day indent, record collection weights, and see payment status. It is Malayalam first and works offline, syncing when a signal is available.

Core screens

- Indent: tomorrow's requested quantity per SKU, with a confirm or revise action.
- Collection: per farmer weight entry with a printed slip.
- Payment: what is due, what was paid, and when the next transfer lands.
- Price: the agreed rate for each SKU for the next 24 hours.

Why offline matters

Nine of the 34 collectives sit in areas with no reliable data signal before 09:00. Weight entry has to work without a connection or the collection stops.

Adoption

34 of 34 collectives active. 1,240 farmers have a payment record in the system. Median time from collection to payment is 41 hours against a 48 hour commitment.
