

Product Overview

Deployment, integration and support

Deployment

Zylo installs as a DICOM node beside the hospital PACS. No change to the modality, no change to the reporting workstation. Median time from kick off to first live study is nine days.

Integration

Supported PACS: Synapse, Centricity, dcm4chee, Orthanc and two Indian vendors. HL7 ORM and ORU messaging for order and result flow where the hospital has an HIS.

Where data sits

Inference runs in the hospital's region on Indian cloud infrastructure. Images are held for 90 days for audit and then archived in encrypted form. No image leaves India.

Support

A named clinical success manager for every hospital, weekly review in the first month and monthly thereafter. Response commitment of four working hours on any triage outage.
