

Loopwise

Retention analytics for Indian D2C brands

Seed round, August 2026

Kochi, Kerala

The problem

- A D2C brand spends 38 percent of revenue acquiring customers.
- Almost all of them can tell you what a customer cost.
- Almost none can tell you which ones came back, or why.
- So they buy the same customer twice and call it growth.

What we do

- We sit on the order and event data the brand already has.
- We show repeat rate by cohort, by product and by acquisition channel.
- Then we name the specific thing to change this week.
- 68 brands, Rs 1.94 crore ARR, live today.

Why now

- Paid acquisition costs in India have roughly doubled in three years.
- The brands that survived 2025 did it on repeat revenue, not on new customers.
- Every founder in the category now has retention on the weekly review.
- Two years ago that conversation did not exist.

The product

- Cohort retention by first product, which is the view nobody has.
- Channel quality scoring, so spend moves to the channel that repeats.
- Churn risk flags at the customer level, pushed into their own tools.
- Setup is a Shopify connect and takes about eleven minutes.

Traction

- ARR up from Rs 1.04 crore in February to Rs 1.94 crore in July.
- 68 paying brands, from 38 in February.
- Net revenue retention 127 percent.
- Logo churn down from 14 percent to 9 percent.

Why they stay

- The weekly action email is opened by 71 percent of brands.
- Expansion comes from adding brands inside the same parent company.
- Six of our largest ten accounts started on the smallest plan.
- We are in the Monday review, which is the hardest place to be removed from.

Unit economics

- Average contract value Rs 2.85 lakh a year.
- Gross margin 81 percent.
- CAC payback nine months, down from fourteen.
- Contribution positive on every cohort since October 2025.

The market

- Roughly 12,000 Indian D2C brands are above Rs 1 crore of annual revenue.
- Our current price puts the reachable market at about Rs 340 crore.
- We do not need a category shift for this to work, only share.
- Adjacent: the same data serves quick commerce brands, untouched so far.

The honest risks

- Top five accounts are 22 percent of ARR.
- D2C budgets follow funding cycles and those are tight.
- Shopify could bundle a basic version of this.
- We are 68 brands, not 680. This is early.

Use of funds

- Rs 7.0 crore, expected to last 20 months.
- Rs 2.8 crore: sales, moving from founder led to a real team.
- Rs 2.2 crore: product, principally the quick commerce data model.
- Rs 1.2 crore: customer success, to hold NRR above 125 percent.
- Rs 0.8 crore: reserve.

The team

- Nikhil Varma, CEO. Six years of D2C growth, scaled a brand to Rs 90 crore.
- Sneha Iyer, CTO. Built an event pipeline handling 40 million events a day.
- Rahul Menon, Customer Success. Onboarded 120 brands before this.
- 14 full time, Kochi and Bengaluru.
