

Product Overview

How it works

Setup

A Shopify connect, or a warehouse connection for brands on other stacks. Median time from signup to first cohort chart is eleven minutes.

What it computes

- Repeat rate by cohort, by first product and by acquisition channel.
- Contribution per cohort after discounting and returns.
- Channel quality scoring, which is repeat rate weighted by margin.
- Customer level churn risk, pushed into the brand's own email tool.

The weekly action email

One email every Monday with three things to change, ranked by rupees. This is the artefact brands actually use and it is why renewal conversations are short.
